

PEMCO Truck Antifreeze 911 (Concentrate) PM9115C

Inorganic (IAT Inorganic Acid Technology) antifreeze -concentrate specially developed for heavy duty vehicles. Designed for all-year-round use in all modern cooling systems containing copper, brass and aluminium components for which the use of antifreeze based on ethylene glycol is recommended. Properties: - Protects metals and alloys (brass, copper, alloyed steel, cast iron, aluminium) reliably against all forms of corrosion and also prevents high-temperature corrosion on aluminium surfaces of modern engines. Already provides sufficient anticorrosive properties at a concentration of 30 %; - Possesses increased resistance to cavitation, effectively resists scale formation and sludge deposition, neutralises the action of chlorides destroying cast-iron cylinder liners; - Has excellent thermal conductivity and resistance to foaming; - Neutral to gaskets and hoses, compatible with all types of rubber and plastic separate parts of the cooling system; - Represents a liquid with outstanding performance properties. Does not contain nitrates, phosphates, amines (NAP-free technology). Recommended for engines that require improved heat dissipation: highly accelerated engines, engines with turbochargers and cooling systems of modern commercial vehicles. Colour: blue Service life: 3 years. Follow the manufacturer's instructions in the operating manual!

RECOMMENDATION

- SAE J1034
- ASTM USA D3306, D4340, D4985
- NATO S-759
- VOLKSWAGEN TL 774 C
